

# POST DEVELOPMENT PROCESS

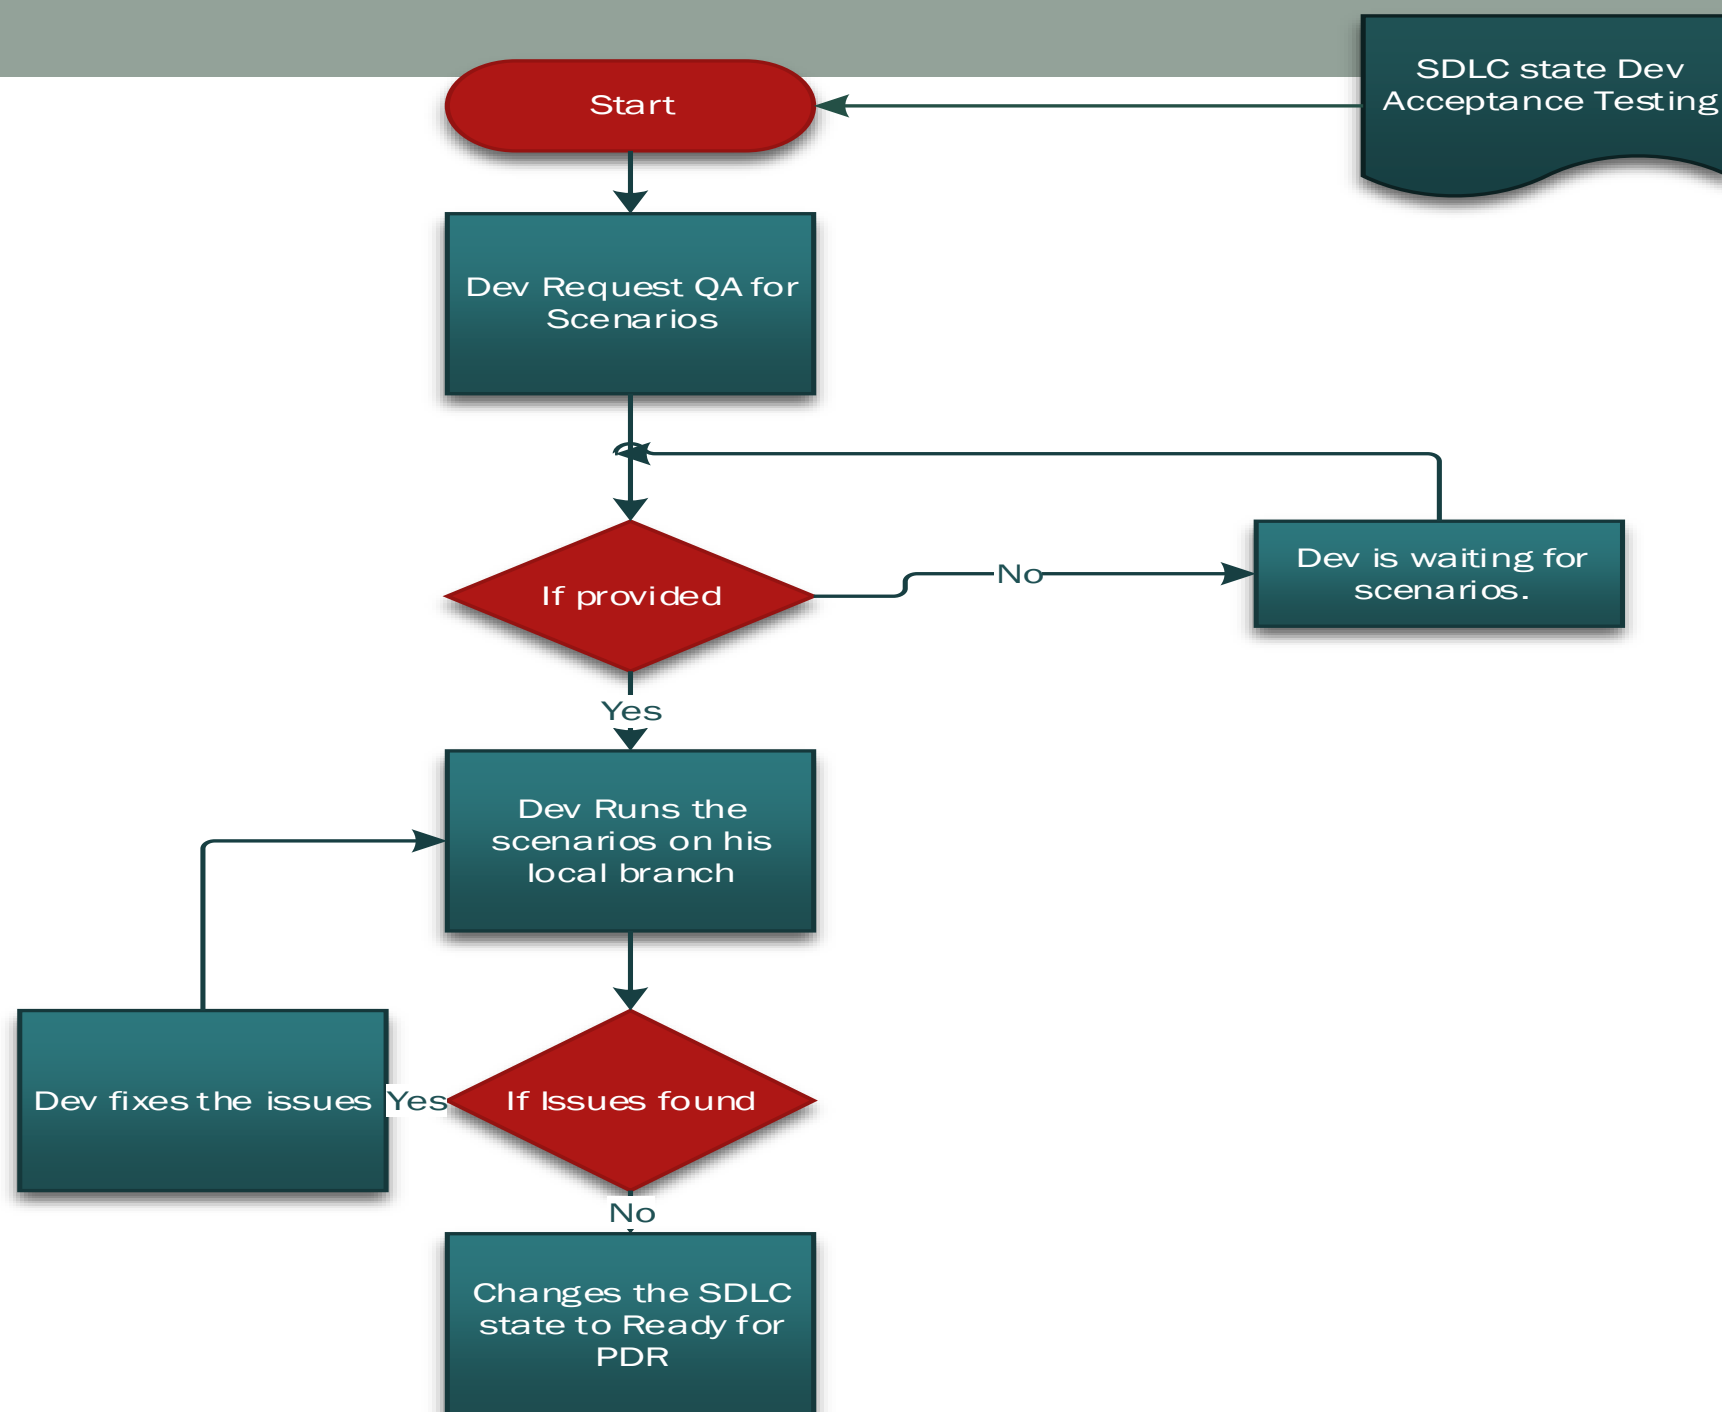

# Pre-requisites of Dev Testing Process

- CR is marked as 'Dev acceptance Testing' in TFS.
- Reviewed test cases are provided to Dev team.

# Dev Acceptance Testing

- QA provides Acceptance, Functional, Field Validation and GUI scenarios to DEV in an Excel sheet.
- DEV executes the scenarios on two browsers IE and Chrome.
- Dev fix the issues if any test scenarios fail.
- Dev updates the record in excel sheet.
- Dev moves the SDLC state to 'PDR'.

# Post Dev Review

- Analysis executes its UATs (User Acceptance Scenarios) and verifies the common workflows on IE, Edge and Safari and ensure that CR is in an operational state.
- Analyst log bugs in TFS for PDR issues and the bugs are fixed by DEV, this process is done in cycles.
- If all bugs are closed and CR has been implemented according to client expectations then Analysis changes the SDLC state to 'Ready for Testing'.
